Skin Contact

Remove contaminated clothing. Wash with soap/cleanser and rinse with plenty of water. If irritation persists, get medical attention.

Eye Contact

Irrigate with water for at least 15 minutes. If irritation persists, then consult a doctor.

4.2 Most important symptoms and effects, both acute and delayed

Inhalation

Some asthmatics or sulphite sensitive individuals may experience wheezing, chest tightness, stomach upset, hives, faintness, weakness and diarrhoea. May cause irritation of the respiratory tract. May be harmful if inhaled.

Ingestion

May be harmful if swallowed. Some asthmatics or sulphite sensitive individuals may experience wheezing, chest tightness, stomach upset, hives, faintness, weakness and diarrhoea.

Skin Contact

May cause irritation.

Avoid contact with skin, eyes and clothing. Ensure adequate ventilation. Wear rubber gloves/eye protection as necessary.

6.2 Environmental precautions

Do not allow spill to enter drains, sewers or water courses.

6.3 Methods and material for containment and cleaning up

Isolate the spillage and absorb with inert material (e.g. sand, earth, diatomaceous earth, vermiculite or absorbent granules). Scoop up and place in a plastic container for disposal according to local/national regulations.

SECTION 7: HANDLING AND STORAGE

7.1 Precautions for safe handling

Avoid inhalation of vapour. Ensure adequate ventilation. Avoid skin contact. Avoid eye contact. Wear suitable protective clothing.

7.2 Conditions for safe storage, including any incompatibilities

Store in tightly closed labelled containers. Store in a cool, dry, well ventilated area. Store away from foodstuffs. Store away from acids, strong bases, oxidising agents and halogenated compounds. Keep out of reach of children/store under lock and key.

Recommended storage temperature 5-25°C.

Contact with strong acids liberates sulphur dioxide.

Acetic Acid Cont.	Severe eye irritation. Severe skin irritation. Acute overexposure to extremely high airborne concentrations of respiratory irritants has been associated with development of an asthma-like reactive airways syndrome (RADS) in susceptible individuals. Extremely high airborne concentrations are not generated during normal conditions of use but may occur following a spill. The potential to generate extremely high airborne concentrations in a spill situation depends upon physical factors such as the concentration of the solution, the volume of the spill, the surface area of the spill, the size of the room where the spill occurred and the ventilation rate in the room.
Sodium Sulphite	No skin irritation. Mild eye irritation.
Sodium Borate	Based on repeated-dose ingestion studies in animals, may cause adverse reproductive and developmental effects. However the doses administered were many times those to which humans would normally be exposed.
Aggravated Medical Conditions	
Pre-existing eye disorders, skin disorders, respiratory disorders.	
Subchronic Toxicity	
No data available.	
Chronic Toxicity	Prolonged exposure may cause chronic effects.
